

# 1 BCL2L14

The protein encoded by this gene belongs to the BCL2 protein family. BCL2 family members form hetero- or homodimers and act as anti- or pro-apoptotic regulators that are involved in a wide variety of cellular activities. Overexpression of this gene has been shown to induce apoptosis in cells.

This gene is found to be expressed in all probes of human, but without significant difference in expression. And we did not find its homolog in bat.
