

1 TAOK2

Homo sapiens TAO kinase 2 (TAOK2), transcript variant 3, mRNA. This gene encodes a serine/threonine protein kinase that is involved in many different processes, including, cell signaling, microtubule organization and stability, and apoptosis. Alternatively spliced transcript variants encoding different isoforms have been described for this gene. [provided by RefSeq, Oct 2011]. This gene is normally expressed in human and bat cells.
